

2-wire programmable transmitter

5331A

- RTD, TC, Ohm, or mV input
- Extremely high measurement accuracy
- 1.5 kVAC galvanic isolation
- Programmable sensor error value
- For DIN form B sensor head mounting

Application

- · Linearized temperature measurement with Pt100...Pt1000, Ni100...Ni1000, or TC sensor.
- · Conversion of linear resistance variation to a standard analog current signal, for instance from valves or Ohmic level
- · Amplification of a bipolar mV signal to a standard 4...20 mA current signal.

Technical characteristics

- · Within a few seconds the user can program PR5331A to measure temperatures within all ranges defined by the norms.
- · The RTD and resistance inputs have cable compensation for 2-, 3- and 4-wire connection.
- · Continuous check of vital stored data for safety reasons.

Mounting / installation

· For DIN form B sensor head or DIN rail mounting with the PR fitting type 8421.
